Subject: Proposal for a Partnership Utilizing the PeacePreneuring Incubator for the Rose Memorial Library Renovation

This executive summary outlines a strategic partnership opportunity between the Rose Memorial Library Association and the PeacePreneuring Incubator to facilitate the library's renovation project. This collaboration is modeled on a modern adaptation of Andrew Carnegie's philanthropic formula, transforming a traditional community investment project into an innovative, transparent, and collaborative digital initiative.

The Challenge:
The goal is to simulate the Rose Memorial Library renovation as a community investment project using a "5D AenimAition" framework and Gemini tools. The initiative aims to digitally preserve the historic schoolhouse and create a transparent platform to foster community trust and economic opportunity. The AenimAition framework involves five key stages: Art, Engineering, Navigation, Immersion, and Marketing.

The Proposed Local Contribution:

Drawing inspiration from Andrew Carnegie's requirement for a local financial and land contribution, this partnership proposes a new model of "local contribution" for the digital age. The Rose Memorial Library Association's local contribution will be the active participation of the community in a Proof of Concept (PoC) project.

This PoC, with a budget of $27,120 and a timeline from 22 June to April 21, 2026, will function as the community's pledge of commitment.

This will be accomplished through the following milestones:

- **Conceptualization & Community Co-Design (June 2025):** The community will provide essential inputs such as 2D photos, historical documents, and text-based feedback. This co-design process will ensure the project reflects community desires and serves as an inclusive, peace-building exercise.
- **Technical Validation & Data Ingestion (July-August 2025):** The community's physical contribution of photographs of the building will serve as the core data set for generating a preliminary 3D model. This action proves the AenimAition concept is feasible and

provides the digital "building site" for the project.

- **Team Recruitment & Prototype Development (August-September 21, 2025):** The community will support the recruitment of local, international, and interdisciplinary teams. These teams will work to create a rudimentary 5D AenimAition prototype, which will validate the collaborative "PeacePreneuring" incubator model.

Conclusion:

This partnership offers a powerful and innovative approach to the library renovation. By blending the community's physical and intellectual contributions with the digital tools of the PeacePreneuring Incubator, we can not only secure funding for the Rose Memorial Library but also establish a scalable business model for future civic engagement projects. The successful completion of this PoC will demonstrate a viable, transparent, and community-driven path forward, ensuring the legacy of the Rose Memorial Library is preserved and enhanced for future generations.

Attached document is the Actual process designed for your project.
